Class: 4A

Teacher: Miss Chan Sze Wing

Saving our world by creating a Really Green Classroom

With a view to reducing the pollution, members of the Environment Club thought of the brilliant idea of a green classroom. Global warming and climate change is becoming more and more serious now. In order to provide a more comfortable and a healthier learning environment for students and raise the eco-consciousness of students and teach students the importance of the environment protection, creating a Really Green Classroom is a must.

The Really Green Classroom has a great variety of eco-friendly features. Firstly, the school would install the solar panels on the windows. The solar energy can supply the electricity for the whole classroom. Not only can it help reduce the energy consumption, but also help the school save the money. Secondly, the school would let the students plant their own flowers in the classroom. The flowers can also decorate the classroom. But the most important thing is planting the flowers can improve the air quality through the respiration of plants, so it can produce a more comfortable study areas for students. Lastly, the school would change the method of teaching. The teachers do not give out paper. Instead, online notes and homework are assigned to students. Textbooks change to electronics textbooks too. The students take notes by using their notebooks. Therefore, it can help the world reduce the number of paper used and reduce the harm to the trees.

Students who visited the Green Classroom feel relaxed because in the city, we can't find the place that let us feel so great. It is meaningful as it can teach our later generation that the environment protection is important. We hope that through this measure, we can let people realize we must save our world by ourselves. Let's make a difference in the world!
