**We should develop more renewable energy
for the sustainability of our environment**

Recently, many people talk about the use of renewable energy and I totally support it. I strongly agree that “We should develop more renewable energy for the sustainability of our environment”.

First of all, the renewable energy will not be exhausted. We can use solar energy, wind power and hydro power unlimited.

Second, the renewable energy cause less pollution unlike fossil fuels which have carbon emission. The renewable energy make people healthier and the world will be greener as well.

Some people say that fossil fuels are better than renewable energy because renewable energy is very expensive especially when building the power plants at the beginning. However the solar energy, wind power and hydro-power are free to obtain from the environment unlike coal and oil. Therefore, renewable energy is not expensive at all.

In conclusion, we should develop more renewable energy for the sustainability of our environment as they are all good for us!
